Datron World Communications Inc. Purchases P-25 Software License From Thales

Faster Time-to-Market, Reduced Manufacturing Costs, Opportunity to Expand to New Frequency Bands Allows Datron to Better Serve Their Customers

San Diego, Calif., February, 26, 2007 - Datron World Communications, Inc., a leader in HF and VHF communication products and services, today announced the purchase of the P-25 software license from Thales for production of the Guardian™ P-25 compliant mobile and portable radio series. The purchase includes AES encryption, GPS capability and Over the Air Re-Key (OTAR).

“This purchase represents our long-term commitment to the public safety market,” said Fred Schwecke, vice president of sales and marketing at Datron. “Our relationship with Thales has been rewarding for both companies and this transaction represents our continued commitment to our respective customers and product development goals.”

“We consider this a win-win transaction for both Thales and Datron,” said Steve Nichols, manager of public safety marketing at Thales. “Today, the timing in the market is right for each of us to focus our efforts on developing products with the unique features and enhancements our customers are requesting.”

With this license acquisition, Datron will be able to more fully enhance their product portfolio with added capabilities and expand the current public safety radios into new frequency bands.

“I look forward to partnering with our current customers and potential customers to develop and deliver feature-rich radios that meet current and future demands for critical communications,” said John Biljan, director of sales for public safety at Datron. “The added flexibility in product development and manufacture will enable us to more cost-effectively and rapidly respond to our customers’ evolving requirements.”

About Thales

Thales is a leading international electronics and systems group, serving defence, aerospace and security markets worldwide, supported by a comprehensive services offering. The group’s civil and military businesses develop in parallel to serve a single objective: the security of people, property and nations. Leveraging a global network of high-level researchers, Thales offers a capability unmatched in Europe to develop and deploy critical information systems. Thales employs 55,000 people in 50 countries and generated revenues of € 10.3 billion in 2005, with a

record order book of over € 20 billion.
