Complete Security Software Package Now Available for Datron's P-25 Guardian Radios

Flash installation makes upgrade simple and easy

Baltimore, Maryland, August 6, 2007 - Datron World Communications, Inc., a leader in HF and VHF communication products and services, today announced the availability of a complete security software upgrade package for their full line of P-25 Guardian radios. Leveraging the recent acquisition of the P-25 software license from Thales, Datron's Guardian radios now offer AES encryption (new Federal standard for encryption), Over the Air Re-Key, and GPS/Data for personnel and asset tracking.

"These security capabilities open new markets at the Federal level for our Guardian line of products," said Fred Schwecke, vice president of sales and marketing at Datron. "Organizations like the Department of Homeland Security (DHS) and the U.S. Border Patrol will be able to take full advantage of our complete line of P-25 radio products."

Radios currently in use in the field will not require a return to the factory for upgrade. They can be quickly updated with these newest security features utilizing a simple flash upgrade. The ease of upgrade and ease of use for these new security features reflects the company's policy of providing performance with the value their customer's expect.

"Adding these new security features significantly enhances the value of our Guardian radios for our current customers and increases the appeal of our radios to new customers," said John Biljan, North America Sales Manager. "Delivering product enhancements that track with the needs of our current customers and the escalating requirements for secure voice and data communication remains foremost in our product development strategy."

About Datron World Communications, Inc.
